

Covid-19

Dear and valued Partner

The corona pandemic is all over and impacts also the international trading business. Whatever we can do to minimize this impact towards you, we will do so.

Fischer Chemicals AG – Availability

You can reach us as usual without any restrictions. Majority of our staff works from home but it does not affect our procedures. Please apologize for any delays in answering due to different availabilities of our partners abroad.

Besides of the order process we specially take care on due deliveries and minimize delays as good as possible.

Situation of deliveries and raw material

India: According latest information no air cargos are possible from and to India until April 14th. Even couriers have stopped their service for India. Many manufacturers are closed down. The one that are still running are having limited outputs only. This situation is mainly caused because of shortage of workers as they have to stay at home.

China: According latest news national and international airlines are allowed to approach China only once a week. This affects the availability of cargo space and therefore prices are increasing rapidly. Sea freight is still easier to book however, also there a price increase of approx. 20% has been noted.

Factories are catching-up their production again. There are still shortages, especially for Antibiotics as well as products in the categories of antivirals and disinfectants.

Covid-19

Italy: Transport of goods through roads and tacks are working.

Although many manufacturers closed down, the one producing essential products (like APIs) remain open. However, delays and shortages may also occur there.

General: Because of reduced manufacturing output in the market, less trucks will be used. Together with the reduced amount of driver punctual deliveries cannot be guaranteed and won't be confirmed by various forwarding agents.

Stay well!
